**RELATIONAL  
EXPERT**

**I can analyse** the ways in which the nervous system & the brain influence criminal personality traits.

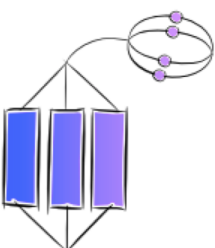

HOW?

For this station you will need the diagram of the nervous system

1. Read about the neuropsychology of criminal personality on page 15.
2. Use this information to label your diagram (add a diagram of the brain if needed) so that you have answered the following questions:
  - a) How does the central nervous system relate to **arousal levels** and the **criminal personality**?
  - b) How do **synapses and dopaminergic neurons** interact in an **overactive dopamine system**? How does this cause **psychoticism**?
  - c) Outline the role of **dopamine reward systems**, the **reticular activation system (RAS)** and the **cerebral cortex**? How do they cause **extroversion**?
  - d) Describe the role of the **autonomic nervous** and the **limbic system**. How do they explain the development of **neuroticism**?

**EXTENDED  
ABSTRACT  
MASTER**

**I can synthesise** my understanding of the theory by evaluating its validity & drawing conclusions about the nurture v nature debate

HOW?

Read page 16 of your textbook

1. As a modern psychologist, you have been asked to interview Eysenck in order to critique his Criminal Personalities Theory. Create a script between yourself and Eysenck outlining **your criticisms of the theory and his responses to these criticisms**.
2. You need to include at least FOUR criticisms with examples.
3. In your script you should also consider the following question: How does early socialisation and difficulties in conditioning children explain the criminal personality? *HINT: Read the bottom of page 15.*
